Non-animal Methods for Toxicity Testing

## A New Website and Interactive Platform

Where stakeholders in government, industry, academia, and NGOs go to exchange technical and policy information in support of the development, validation and acceptance of non-animal methods for toxicity testing

**Toxicity Testing Resource Center (TTRC):** serves as a comprehensive resource on toxicity testing and non-animal test methods. Topics include:

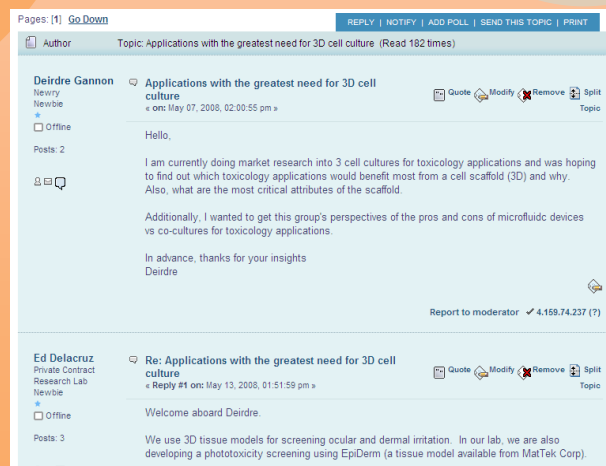

- Current *in vivo* approaches in toxicity testing
- Non-animal approaches (*in vitro*, *in silico*, and integrated testing strategies)
- Stakeholder programs and policies
- Validation and regulatory acceptance processes and achievements
- Challenges and opportunities
- Informational resources, including events, databases and funding sources

The TTRC also features “**Way Forward**” essays--written by invited experts--on expediting progress in various subfields.

**Interactive Forums:** encourage information exchange, commentary and discussion among users on technical and policy issues. The Forums cover topics within four message boards:

- Toxicity Endpoints & Tests
- Emerging Technologies
- Programs & Policies
- Overarching Challenges & Opportunities
